Suitable for **table runners, placemats, and outdoor deck chair fabric (sun loungers).Not suitable for weft-direction tension** *(warp-direction tension only)*. Therefore, **not recommended for director's chairs**.

Manufacturing Recommendations:

Hem each fabric panel and stitch the pieces together to ensure stronger, more durable seams.

Light Fastness:

It is difficult to establish a precise correlation between the light fastness of printed fabrics and their actual durability. Various factors in addition to light exposure—such as sunlight intensity and humidity—can affect the print over time. The table below provides an approximate guide to the relationship between the light fastness rating (Blue Wool Scale) and the expected print durability:

8 -	Outstanding	2 years
7 -	Excellent	7 to 12 months
6 -	Very Good	3 to 6 months
5 -	Good	2 to 3 months
4 -	Fairly Good	1 month
3 -	Moderate	2 weeks
2 -	Poor	4 to 7 days
1 -	Very Poor	1 to 2 days

Note: For **Blue Wool Scale** ratings above **Grade 5**, if the colour change falls between two adjacent grades, both grades are indicated (e.g. **5–6**). If the colour darkens during testing, the letter **"N"** is added to the rating.
